Abstract

Women's agency in resolving partner violence (PV) is well documented. However, empirical, theoretical, and clinical understandings of PV in South Asia in general, and Sri Lanka in particular, are limited. This is the first in-depth investigation into women's help-seeking, coping, and social support in the context of PV in Sri Lanka. Its primary aim is to examine women's coping strategies and support systems in ending violence, whilst developing a theory for women's responses to PV. Insofar as it links these variables in a single study, and attempts to develop a theory of resilience in the face of PV, this investigation is also the first of its kind for South Asia. Women's process of responding to PV is examined using a representative sample of types of PV, relationships, PV experiences, help-seeking, and socio-demographics.

Eighty-four participants accessing crisis centres and hospital desks were selected. The mixed methods design included questionnaires and interviews. For analysis, qualitative grounded theory was employed, backed by quantitative analysis of the constructs examined.

The main contribution is a theory developed to explain the process of women's responses to PV. The theory encapsulates the process of resilience development and recovery in responding to PV. It demonstrates that responses to violence occur as a non-linear, five-stage process, with regressions in most stages. The theory posits that critical incidents and turning points facilitate moments of insight leading to insight-mediated personality changes and to progression through the stages. It also demonstrates that participants employ increased resilience to transform themselves, the PV, and the culture they occupy. The theory also demonstrates that coping, support seeking and support giving occur as non-linear processes, whilst cognitive development and women's development of agency occur as linear processes. The findings support the study's hypotheses by demonstrating that various coping strategies

(problem and emotion focused) and support systems (informal and formal) are necessary for ending PV. The study identified the critical roles of socio-cultural factors as obstacles, and children as essential support givers, for women's agency in ending PV. Besides contributing theoretically and empirically to several research domains, this study also addresses service-provision needs of help-seeking women.

Statement of Candidate

I certify that the work in this thesis titled “(Un)making the good woman: The process of resilience development and recovery to end partner violence” has not been submitted for a higher degree to any university or institution other than Macquarie University.

I certify that all information sources and literature used are indicated in this thesis. I also certify that the thesis is an original piece of research conceptualized and written by me. Any help and assistance I have received in my research work and the preparation of the thesis have been appropriately acknowledged.

This thesis is submitted as a thesis by publication and includes a published chapter as part of the thesis.

The research presented in this thesis was approved by the Macquarie University Ethics Review Committee (Human Research), Reference number: HE24NOV2006-M04956.

Acknowledgements

This project is a result of my journey into furthering psychology and psychological services in Sri Lanka. Many contributed to enable me to become a therapist. I owe my deepest gratitude to you all, including the clients I worked with who taught me invaluable lessons in recovery. For this doctoral dissertation, my first acknowledgment is to the 84 participants of the study. Next, I express my deepest gratitude and appreciation to Dr. Doris McIlwain, who travelled with me to unravel the complexities of partner violence. Your enthusiastic mentoring helped me to regain confidence in research, learn new methodologies, write and publish, and strengthen my analytical skills. You supported me in the design, data collection, analysis, and in the writing process. I thank you also for your support in funding matters, especially your effort in securing the completions grant. Your insight and input, particularly during the difficult times, were invaluable.

Many thanks are also offered to Dr. Judy Lattas for initiating my application into the University and helping with funding issues, amongst other things. I extend my deepest gratitude to Dr. Alan Taylor for untangling my statistical confusion and helping me to be less fearful and more confident of quantitative analysis. Thank you for your critical input. I extend warm gratitude to Dr. Piyanjalee De Soyza, for your continuous support throughout this process and for keeping me grounded in the Sri Lankan realities pertaining to the study. Enormous gratitude is due to Dr. Yasmin Tambiah for giving critical input during all stages. I learnt so much regarding the writing process from you. This thesis owes you much.

My warmest appreciation and gratitude to Women in Need, Sri Lanka, for enabling the data collection for the study. Deepest gratitude to Savithri Wijesekera, Dilrukshi De Alwis,

Sumithra Fernando, and to all staff at various WIN branches, for your infectious and enthusiastic support from the onset of this project. I extend my deepest thanks to all the counsellors and lawyers at the selected WIN sites who so generously provided their time and energy for this study – especially to Nandani, Padma, Dharshani, Anoja, Minalilatha, Farana, Sevbandi, Lucille, H.C.M.S. Kumari, Indrani, Chandrakanthi, Priyanga, M.M.D. Rasanjali, Jayani, P.N. Balasuriya, Kumari Herath, G.G.P.T. Dharshani. Thank you also to Premaratne for coding and N. Vajirani for transcribing. My sincere thanks also to the Expert Panel in Sri Lanka for their role in validating the questionnaire.

My deepest gratitude to my funders for your financial commitment. Your faith in this project enabled me to complete the thesis. I am thankful to Mr. Rob Fildes (OAM), and to General Dahalan Alhamad, for your generous support. I extend gratitude to the Department of Psychology, and particularly to Professor Bill Thompson, for the completions grant.

Thank you also to Associate Professor Joan Kirkby, with whom I shared an office, for all your encouragement and support throughout the project. I would also like to thank Vicky Worthington for your help and therapeutic laughter in the office. Special thanks to the many other colleagues, friends, and family in Sri Lanka and Australia, who supported and encouraged this work. There are too many to name individually.

Finally, I acknowledge the four persons without whom this project would neither have begun, nor have proceeded to completion. You are my most cherished support system – you raised me up so that I could attempt to be the best of me. I am indebted to your resilience, courage, accomplishments, and inspirational presence in my life. My deepest gratitude to my

incredibly resilient parents, thank you for your love and amazing support over the years, and for the innumerable opportunities provided for me to develop, both professionally and personally. Thank you for your emotional and financial support throughout this thesis and for allowing me to follow my goals. To Kalanie, for the amazing, consistent, and continuous emotional and other support provided over the last two decades – thank you for always believing in me and for being there. Thank you for your support throughout this project, especially for providing insight into various aspects of the study, for translating questionnaires, and for your invaluable help in formatting the thesis. Your support inspired me to conceptualize some aspects of this thesis. To Yasmin, the one person to whom I owe everything in regards to realizing the goal of completing this thesis – your consistent commitment to this project and to my well-being made it possible. I thank you so much for your belief in me, for enabling me to become a researcher, for always being there for me, and for providing me with every necessary facility, space, time, and comfort in order for me to realize my goals. Thank you for your consistent and incredibly generous support, care, and consistent presence intellectually, emotionally, financially, and in many other ways.

I dedicate this thesis to the four of you.
