

## **APPENDIX I**

## APPENDIX I.

## CONTENTS

<b>Appendix I.1.</b> Blank and representative geological data-recording sheets.	i ii iii - vi
<b>Appendix I.2.</b> Index card system for ichnotaxonomic studies.	vii - x
<b>Appendix I.3a.</b> Consolidated index of field samples, field sample numbers, and relevant Macquarie University catalog numbers, location details and other information about the samples.	xi - xv
<b>Appendix I.3b.</b> Tabulation of Macquarie University catalog sample numbers of specimens from the study area and related field sample numbers.	xvi - xviii
<b>Appendix I.4.</b> Statistical discrimination of vertical cylindrical burrows of <u>Skolithos</u> sp? (201/MU.44386) from Turimetta Head and <u>Skolithos linearis</u> from the Lower Cambrian Bradore Formation of Labrador (Pemberton & Frey, 1984), on the basis of distance-to-nearest-neighbour data.	xix - xxii
<b>Appendix I.5.</b> Summary information regarding data samples of burrow form and orientation measured on burrows of the new ichnotaxon <u>Barrenjoeichnus mitchelli</u> at outcrop 1, Barrenjoeey Head (area 1), GR. 4520,8277 Broken Bay (9130-I-N). Details of burrow form (geometry) and orientation (inclination angle ( $\Theta$ ) and azimuth or trend angle ( $\phi$ )) are tabulated in Appendixes I.5a - I.5y.	xxiii - xliv
<b>Appendix I.6.</b> Summary information regarding data samples of burrow form and orientation measured on burrows of the new ichnotaxon <u>Barrenjoeichnus mitchelli</u> at outcrop 2, Barrenjoeey Head (area 1), GR. 4502,8275 Broken Bay (9130-I-N). Details of burrow form (geometry) and orientation (inclination) angle ( $\Theta$ ) and azimuth or trend angle ( $\phi$ ) are tabulated in Appendixes I.6a - I.6f.	xvi - xl ix
<b>Appendix I.7.</b> Azimuth of burrow bifurcation/branching from main burrow in <u>Barrenjoeichnus mitchelli</u> at outcrop 1 (GR.4520,8277 Broken Bay (9130-I-N) between TF1 and TF4 (T7.5 - T12.0).	i
<b>Appendix 1.8.</b> List of trace fossils present in the study area with interpretation in terms of their ethology, tropic level, possible producer organism(s) and ichnofacies affinities (body fossils of both animals and plants are included for completion).	ii - l iiii

## APPENDIX I.2

### EXPLANATION OF THE KEY SYSTEM FOR THE TRACE FOSSILS IDENTIFICATION CARDS

- SYSTEM (1)** Vertical series (top).  
A - Z Alphabetical order of generic names of the trace fossils. (Mc is not used, only 26 holes).
- SYSTEM (2)** Vertical series (top).  
A-E-I-O-U vowels holes are used for the possible animal or animals that produced the trace fossils (producers). Five holes are available for groups of animals that produced similar traces.  
A. Worms or worm-like animals (polychaete, oligochaete etc.).  
E. Arthropods (trilobites, eurypterids etc.).  
I. Mollusca and brachiopoda.  
O. Echinoids, corals, bryozoans and sponges.  
U. vertebrate tracks, gastroliths, coprolites and faecal pellets.  
(Nb. vertical holes from 1 - 5 can be used for more unknown producers).
- SYSTEM (3)** Horizontal series (right side).  
(Environment 6 - 19)  
This area is for the specific environment that trace fossils are confined to, but there are also some trace fossils that are independent of facies; one has to cut out several holes to take account of such variations.  
6. Terrestrial (non-marine, fluvial, lacustrine or in soils).  
7. Deltaic.  
8. Lagoon.  
9. Backshore.  
10. Beach.  
11. Tidal flats.  
12. Foreshore.  
13. Shoreface.  
14. Barrier bars  
15. Nearshore.  
16. Upper offshore.  
17. Lower offshore.  
18. Bathyal.  
19. Abyssal, Hadal.  
20 - 24 free for additional environments.
- SYSTEM (4)** Vertical series (bottom).  
(Ethological and preservational).  
Part one. Based on ethological and behavioural characters classified by Seilacher (1953) and Ekdale et al., (1984).  
25. Cubichnia - lying or resting-traces.  
26. Domichnia - dwelling-traces.  
27. Fodinichnia - feeding-traces.

28. *Pasichnia* - grazing-traces.
29. *Repichnia* - crawling-traces.
30. *Fugichnia* - escape-traces.
31. *Agrichnia* - farming-traces.

Part two. Based on preservational and toponomic characters classified by Martinsson (1970).

37. *Epichnia* - upper surface traces (+,-).
36. *Endichnia* - inside traces (in main casting medium).
35. *Hypichnia* - undersurface traces or sole traces (+,-).
34. *Exichnia* - outside traces (outside of main casting medium).
- 33 - 32. additional holes for other preservational traces.

**SYSTEM (5)**

Vertical series (bottom).  
(Taxonomical).

Identification of ichnotaxonomic characters.

46. Boring - in hard shells, and rocks of substratum.
45. Tracks - biped, quadruped vertebrate tracks and arthropod tracks.
44. Coprolites - coprolites, gastroliths and faecal pellets.
43. Trails - crawling and creeping patterns.
42. Burrows - full-relief (infaunal).
41. - orientation vertical.
40. - orientation horizontal.
39. - branching and bifurcating - trifurcating.
38. - other patterns.

**SYSTEM (6)**

Horizontal series (left side).  
(Geographical).

Geographical extension of trace fossils.

58. North America.
57. South America.
56. Europe.
55. Russia and China.
54. Africa and Middle East.
53. South East Asia and Japan.
52. Australia and Pacific Islands.
- 47 - 51. Free for other geographic categories.  
Nb. Alternatively, holes 47 - 58 can be allocated to stratigraphic categories of either local or regional or global scale.

**SYSTEM (7)**

Horizontal series (left side).

Classification on the basis of ichnofacies.

- 66 - 70. Free for other ichnofacies (e.g.,

Teredolites ichnofacies).

65. Scyenia ichnofacies.

64. Skolithos ichnofacies.

63. Glossifungites ichnofacies.
62. Cruziana ichnofacies.
61. Zoophycos ichnofacies.
60. Nereites ichnofacies.

**SYSTEM (8)**

Internal series.

Genus - ichnogeneric name.

Species - ichnospecies name.

Variety - intra-ichnospecific or ichnovarietal name.

Family - group name above generic level

Reference -

General -

(Nb. If there is not enough space for more than one reference used the reverse side of the card or an additional card.)

1. The study area is covered by three 1:25,000 orthophoto maps. These are; Broken Bay (9130-I-N), Mona Vale (9130-I-S), and Sydney Head (9130-II-N). No sample were collected for study within the latter map area, but were studied at reconnaissance level.

\* - These samples are not from the study area but are from miscellaneous other areas and were given to the author by colleagues. They are not treated or otherwise described in this report but are included in this tabulation for completeness of the trace-fossil collection made here. These specimens will be described elsewhere.

**Appendix I.4a. Statistical discrimination of cylindrical vertical burrows of Skolithos sp? (in sample 201/MU.44386) from Turimetta Head and Skolithos linearis from the Lower Cambrian Bradore Formation of Labrador (Pemberton & Frey, 1984), on the basis of the distance-to-nearest-neighbour data the 't' test.**

**I. Parameters of Turimetta Head burrows (from Table 8.3).**

Mean distance in the sample group  $\bar{x}_0 = 0.576$

Degree of observed distribution departure from random  $R_0 = 0.565$

Total number of measurements  $N_0 = 116$

**II. Parameters of Bradore Formation burrows (Pemberton & Frey, 1984, table 3).**

Mean distance in the sample group  $\bar{x}_1$

Degree of observed distribution departure from random  $R_1$

Total number of measurements  $N_1$

Seven data sample are tested using distance-to-nearest-neighbour data.

	<u><math>\bar{x}_1</math></u>	<u><math>R_1</math></u>	<u><math>N_1</math></u>
1.	0.985	0.98	99
2.	0.914	0.94	106
3.	0.870	0.04	142
4.	0.825	1.05	162
5.	1.072	1.52	201
6.	1.132	1.65	212
7.	1.070	1.66	242

't' test statistical discrimination equation applied to each sample of Skolithos linearis data from the Bradore Formation (SB) and Skolithos from Turimetta Head (Tur):

$$t = \frac{(\bar{x}_0 - \bar{x}_1)(N_0 \times N_1) / (N_0 + N_1)}{(N_0 - 1) R_0^2 + (N_1 - 1) R_1^2 / N_0 + N_1 - 2}$$

$$\text{Tur vs. SB} \quad t = \frac{(\bar{x}_0 - \bar{x}_1)(N_0 \times N_1) / (N_0 + N_1)}{(N_0 - 1) R_0^2 + (N_1 - 1) R_1^2 / N_0 + N_1 - 2}$$

$$t_1 = \frac{(0.567 - 0.985)(116 \times 99) / (116 + 99)}{(116 - 1) 0.565^2 + (99 - 1) 0.98^2 / 166 + 99 - 2} = 3.82$$

't' result      Probability      Interpretation

$t_1 = 3.82$	$P > 0.1\%$	Significantly different
$t_2 = 3.279$	$0.5\% > P < 0.1\%$	"
$t_3 = 2.732$	$1\% > P < 0.5\%$	"
$t_4 = 2.492$	$2.5\% > P < 1\%$	Probably difference is significant
$t_5 = 3.382$	$P = 0.1\%$	Significantly different
$t_6 = 3.529$	$P > 0.1\%$	"
$t_7 = 3.117$	$0.5\% > P < 0.1\%$	"

**Appendix. I.4b. Statistical discrimination of cylindrical vertical burrows of Skolithos sp? (in sample 201/MU.44386) from Turimetta Head and burrows of Skolithos linearis from the Lower Cambrian Bradore Formation of Labrador (Pemberton & Frey, 1984), on the basis of distance-to-nearest-neighbour data using the 'student t' test.**

**I. Parameters of Turimetta Head burrows (from Table 8.3).**

Number of distance measurements in the sample group  $n = 116$   
 Mean of distance measurements in the sample group  $m = 0.576$   
 Standard deviation of the sample measurements ( $n$ )  $S = 0.45$

**II. Parameter of Bradore Formation burrows (Pemberton & Frey, 1984, table 3).**

Mean of large parent group ( $M$ )  $= (M_1 \text{ to } M_7)$

Seven data samples are tested using distance-to-nearest-neighbour data.

1.  $M_1 = 0.985$
2.  $M_2 = 0.914$
3.  $M_3 = 0.87$
4.  $M_4 = 0.825$
5.  $M_5 = 1.072$
6.  $M_6 = 1.134$
7.  $M_7 = 1.07$

Student 't' test statistical discrimination equation applied to each sample of Skolithos linearis data from the Bradore Formation (SB) and Skolithos data from Turimetta (Tur):

$$\text{Student } t = \frac{n [M - m]}{S}$$

Tur vs. SB      Student  $t = \frac{116 [0.985 - 0.576]}{0.45} = 9.789$

<u>t result</u>	<u>Probability</u>	<u>Interpretation</u>
$t_1 = 9.789$	$P > 0.2\%$	Significantly different
$t_2 = 8.09$	"	"
$t_3 = 7.04$	"	"
$t_4 = 5.96$	"	"
$t_5 = 11.87$	"	"
$t_6 = 13.36$	"	"
$t_7 = 11.82$	"	"

**Appendix I.4c. Statistical discrimination of cylindrical vertical burrows of Skolithos sp? (in sample 201/MU.44386) from Turimetta Head and Skolithos linearis burrows from the Middle Silurian Thorold Formation of Southern Ontario (Pemberton & Frey, 1984), on the basis of distance-to-nearest-neighbour data using the 't' test.**

**I. Parameters of Turimetta Head burrows (from Table 8.3).**

Mean distance in the sample group  $\bar{x}_0 = 0.576$

Degree of observed distribution departure from random  $R_0 = 0.565$

Total number of measurements  $N_0 = 116$

**II. Parameters of Thorold Formation (Pemberton & Frey, 1984, table 4).**

Mean distance in the sample group  $\bar{x}_1$

Degree of observed distribution departure from random  $R_1$

Total number of measurements  $N_1$

Nine data samples are tested using distance-to-nearest-neighbour data.

	<u><math>\bar{x}_1</math></u>	<u><math>R_1</math></u>	<u><math>N_1</math></u>
1.	1.53	1.04	23
2.	1.14	0.88	23

<sup>1</sup> Average diameter (measured at top, middle and lower part of each burrow).

<sup>2</sup> Most of the burrow lengths measured here constitute the entire length from opening or aperture to terminal end, but some measurements represent partial length due to incomplete exposure.

<sup>3</sup> V = 90° (no trend angle)

<sup>4</sup> Six distinctive burrow forms or geometrics were recorded: (1) uniform cylindrical (UC); (2) branching upward (BU); (3) branching downward (BD); (4) tapering upward (TU); (5) tapering downward (TD); and (6) irregular shape (IR).

**Appendix I.5b.** Burrow inclination angle ( $\Theta$ ), azimuth or trend ( $\phi$ ), and burrow geometry recorded for burrows of Barrenjoeichnus mitchelli in data sample 2 (cf. Appendix I.5).

<sup>1</sup> Average diameter (measured at top, middle and lower part of each burrow).

<sup>2</sup> Most of the burrow lengths measured here constitute the entire length from opening or aperture to terminal end, but some measurements represent partial length due to incomplete exposure.

<sup>3</sup> V = 90° (no trend angle)

<sup>4</sup> Six distinctive burrow forms or geometrics were recorded: (1) uniform cylindrical (UC); (2) branching upward (BU); (3) branching downward (BD); (4) tapering upward (TU); (5) tapering downward (TD); and (6) irregular shape (IR).

<sup>1</sup> 'L', Length of the branch (normally only partly exposed, not recommended for measurement).

<sup>2</sup> Angle between main burrow and branch (normally angles are less than 45° and are variable, not recommended for measurement).

<sup>3</sup> 'T' lines where diameter of burrows' openings are measured; measurements of branches or bifurcations are normally taken below these lines.

APPENDIX I.8. List of trace fossils present in the study area with interpretation in terms of their ethology, trophic level, ichnofacies and also their possible producer(s). (Body fossils and plant fossils are also listed here for completion).
