Declaration

I hereby declare that this thesis entitled “An investigation of the evolution of the structure and function of Egyptian administration in the Pre and Early Dynastic periods” has not been previously submitted for assessment at a tertiary institution.

The research and findings within are my own work, and any assistance received and sources of information used have been acknowledged and referenced where appropriate.

Dated this day of , 2019

Matthew Warren Bernard George

Abstract

The study of the administration in Egypt is ultimately a study of the control that the Egyptian government was able to exert over its population. However, despite the existence of scholarly works on later periods, there is comparatively little knowledge of the administration from the Late Predynastic and Early Dynastic periods. It is the goal of this research to track the evolution of the structure and function of the administration in Egypt from the end of the Predynastic Period through to the beginning of the Old Kingdom. This study will seek to combine textual, archaeological and iconographic data in order to provide both quantitative and qualitative data regarding the Egyptian administration. The expected outcome of this work is that it reveals the dynamic change experienced by the administration, and that we have a clearer picture in regard to how the early Egyptians viewed the administration, how it was utilised in the context of Egyptian society, and the role this entity played in the state formation process. This work also provides us with an understanding of how the perception of the administration has changed in modern scholarship throughout time.

Acknowledgements and Dedication

First and foremost, my amazing supervisor A/Prof. Yann Tristant needs to be acknowledged. I could inform you about the influence that Yann has had on me in terms of my academic life, which has been nothing short of immense, or I could regale you with various personal tales of drinking whisky, sharing meals, losing bets, and having far too much fun watching YouTube videos. All I will say is that I would not have been able to undertake this project without Yann, and he is one of the best friends I have ever had and will ever have. My sensational associate supervisor, A/Prof. Boyo Ockinga also needs to be mentioned. Boyo has always been an amazing sounding board throughout this process. Whilst we might not have met with the same level of frequency as Yann and I, he was always willing to discuss my work, and always inquired how I was going.

The people I know from my time at Macquarie University are, in my humblest opinion, some of the best people in the world. I would list you all out, but I fear that it would be as long as my thesis, so I will have to be brief. I wish to thank Aaron De Souza, Sue Kelly, Rodney Cross, Gillian Smith, Lydia Bashford, Caleb Hamilton, Lawrence Xu Nan, Samantha Jones, Georgia Barker, Ellen Ryan, Milena Kooyman, Charles Barnett, Chris Haddad, Jacinta Carruthers, Ronika Power, Susanne Binder, Beverley Miles, Mary Hartley, Richard Bott, Nikki Leary, Alex Woods, Tom Hillard, Lea Beness, Chris Hale, Emmanuel Roumanis Scott Allan, Brenan Dew, and Alice McClymont. You're all amazing people, and all that can really be said is that I love you all very much.

However, two people from this list need a special acknowledgement, and they are Olivier Rochecouste, and Danielle Sass. Olivier is my oldest friend at uni and has been with me since that first day of hieroglyphs all the way through to our PhDs. We've laughed, travelled Australia and the world, eaten and drank, disagreed about football and general life. But we've never been anything other than great mates, and we shall always be great mates. With Danielle, I cannot remember a time when we didn't know each other, nor do I ever want to get to a stage where she is not in my life. She has been a sounding board for me to bounce ideas off, someone to talk about pop culture with, a great convention buddy, and someone I can talk to without any judgement. She is one of my best friends, and I love her like a sister. I cannot wait to see what the future holds for you, and I will always be around to grab lunch.

I cannot forget my family, and their role in this work. Firstly, there is the family that I was born into, with my brother Ashley, my sister Megan, my cousin Paul, and my grandmother Mary. These people, and many others, all offered me unconditional love, advice, support, and so many more things. You all know I love you very much, and I hope you realize the role you've played in getting me to this point in my life.

Secondly, there is the family that I chose. That consists of my three brothers, Owain "Skippa" Thomas, Adam Fazzolari, and Damian Jakimovski. You lads have been amazing to me, and simply put I would not have gotten through this without your support, distractions, our sadly infrequent catch ups, and finally the providing me with a pity hattrick on FIFA. Nothing more needs to be said other than you are all the best! Your amazing wives and partners also should be mentioned, Sam, Roseanne, and Victoria, I don't know if you'll read this but thank you so much for all you've done for me, even if it was something as simple as letting the boys play a few video games, so I could have some distraction.

Finally, there are two people whose contribution goes far beyond anything else. My parents have been the greatest support one could ever ask for. They've been willing to sacrifice their time, resources, sanity, and so many more things to see me succeed. They have always encouraged me, pushed me, provided for me, and above all else, loved me. I dedicate this work to my father Mark Gabriel George, and my mother Maria Elizabeth George, as without them it simply would not exist. I love you both so very much, and I shall never forget what you've done for me!

List of Conventions and Abbreviations

This work utilises the Author Date method of referencing resources. In circumstances where where a multi-volume resource is used, such as Peter Kaplony's *Die Inschriften der Agyptischen Fruhzeit*, the volume number is also provided in the footnote:

e.g. Kaplony (1963, vol I, p.1)

The exception to this is the third volume of *Die Inschriften der Agyptischen Fruhzeit*, which is written in footnotes, and the database as such:

IÄF III fig. 1

When works from a single author are published in the same calendar year, a letter is utilised to differentiate the multiple works. This convention, only seen in the footnotes, starts from the letter 'A' and follows the alphabetical sequence as such:

Kahl (2004a, p.1); Kahl (2004b, p.1)

When hieroglyph codes are mentioned, unless specifically indicated otherwise, this research uses the codes established by Alan Gardiner, which is indicated by the capitalisation of the letter in the code reference e.g. "A1." The other sign list that has been employed by this research is that established by Jochem Kahl in *Das System der ägyptischen Hieroglyphenschrift in der 0.-3. Dynastie*, and this is indicated by the usage of lower-case letters in the code reference e.g. "a1.
